

Update of the digital certificate of Sepblac within DMO software

Declarations made via DMO software are encrypted with digital certificates. The digital certificate of Sepblac included by default in version 3.0 of DMO software is already expired. Consequently, **all those obliged subjects who install DMO software must update the digital certificate of Sepblac pre-installed within the aforementioned software.**

This document specifies the steps to download and install the current digital certificate of Sepblac in those computers with DMO software already installed.

This procedure must also be applied in all computers with DMO software. It is not possible to process any declaration or fractionation submitted from computers with a not updated digital certificate of Sepblac and, consequently, declarations and fractionations will be rejected.

1. Download the digital certificate of Sepblac

The digital certificate of Sepblac can be downloaded from www.sepblac.es > *Obliged subjects* > *Formalities* > *Systematic reporting (DMO)* by clicking on "Digital certificate of Sepblac". (<https://www.sepblac.es/en/obliged-subjects/formalities/systematic-reporting/>)

The file containing the certificate must be saved at any directory of the local computer and this location will be later requested during updating process. This file will need to be used according to the following steps.

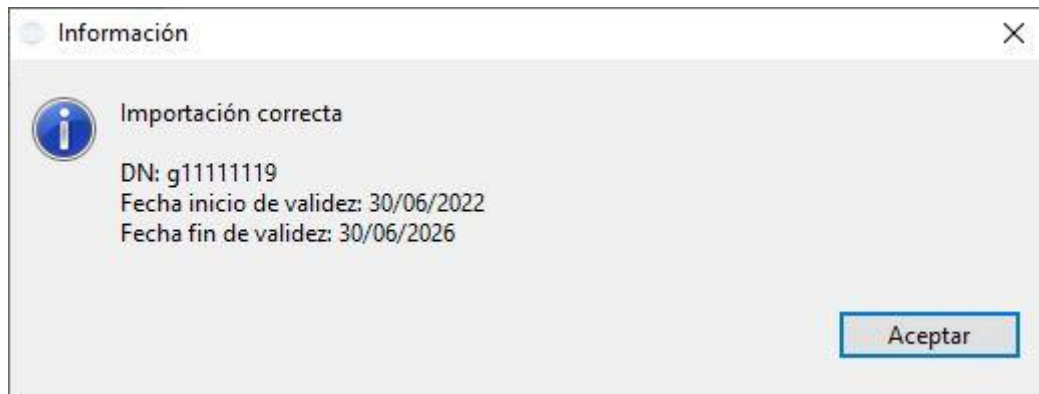

2. Update the digital certificate of Sepblac within DMO software

Once downloaded as detailed in the previous step, the following instructions will need to be repeated on every computer with DMO software:

1. Run DMO software by the user with the administrator role ("*Administrador*").
2. Once opened, select option "*Importar Certificado Sepblac*" from the "*Mantenimiento*" menu.
3. Look for the previously downloaded file within the local computer, select it and press "Open".

SEPBLAC

4. Once the certificate import has been completed, a message will be displayed on the screen showing the valid dates for the digital certificate. As an example it should be a message similar to the next one but with the valid dates:

Once imported, DMO software will be ready to be used on the local computer with the new digital certificate of Sepblac.
